Clinical Pharmacology & Therapeutics II

Course Director D. R. Kennedy

**The Division of Extension
University of Toronto**

This course is designed to acquaint the pharmacist with some important disease conditions and the methods used to treat these conditions. It will be an extension of the lecture series given in 1967-68. However, attendance at the previous course is not necessary for participation in this series of lectures. Selected speakers from the fields of pharmacy and medicine will conduct the sessions.

Lectures will deal with both disease conditions and the drugs used to treat the diseases. The chemistry and pharmacology of the drugs will be reviewed and discussed. In addition, the pathology and the therapeutics of the disease will be examined. The course is intended to better qualify the pharmacist to understand the disease conditions and their treatment and to be able to function more efficiently as a member of the health service professions.

Prerequisite: A degree in pharmacy.

Suggested Reference Books are:

L. S. Goodman and A. Gilman:
*The Pharmacological Basis of
Therapeutics* (latest edition),
MacMillan.

W. Modell, editor: *Drugs of
Choice* 1966-67, Mosby.

Wednesdays, commencing
October 9, 1968, 8:00-10:00 p.m.,
105 Pharmacy Building,
25 Russell Street,
St. George Campus.

\$60.00 — 20 sessions
